Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Devlin et al.* (EP0624004A1) in view of *Brady et al.* (6,442,374).

As per claim 1, *Devlin et al.* disclosed a surface mountable high power block up-converter having a mixer (fig. 3/no. 9) configured to receive an IF frequency signal and a local oscillator (fig. 3/no. 3) signal and outputs an RF frequency signal and a high power amplification (fig. 3/no. 17).

Devlin et al. discloses such MMIC device but not explicitly a Monolithic Millimeter Wave IC. However, such is well known in the art, as suggested by *Brady et al.* (abstract). Therefore, it would have been obvious to one of ordinary skill in the art to provide such suggestion, as suggested by *Brady et al.*, to the communication device of *Devlin et al.* in order to improve data transmission rates and range.

As per claims 2 and 5-6, as stated above in claim 1, the modified communication device of *Devlin et al.* further disclosed a sub-harmonic mixer, a substantially encasing HP-BUC and can be surface-mounted (see *Brady et al.*, col. 11/ln. 6-29).

Art Unit: 2685

As per claim 3-4, the modified communication device of *Devlin et al.* further disclosed an insert having such high thermal conductivity and expansion (see *Brady et al.*, col. 11/ln. 6-29).

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Yamada (6,809,688), Kaneko et al. (6,275,684), Geddes et al. (6,208,214), and Williams (6,133,795) disclose high frequency device for use in a radiotelephone communication system.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Pablo Tran whose telephone number is (571)272-7898. The examiner normal hours are 9:30 -5:00 (Monday-Friday). If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Edward Urban, can be reached at (571)272-7899.
